To S.C. Public Service Commission,

I am writing in regard to Docket #2005-385-E which concerns the review of the S.C. Public Service Commission and the potential of requiring net metering for the state. I would urge the Public Service Commission to approve this new requirement and join 40 other states that require utilities to accept electricity generated by homes and businesses. This measure is important to the South Carolina in terms of our economy and health, and important to the entire nation in terms of our national security. The passage of this measure would permit our citizens and businesses to contribute clean electricity to our economy using renewable resources. I hope that the S.C. Public Service Commission embraces this and provides the State and it's citizens with a new vision for our future. We need to understand how important measures like these are in addressing the serious energy and climate change problems we are now facing. Please pass net metering for the State of South Carolina.

Sincerely,

**RECEIVED**
